Text

Font type: Calibri 25-29pt

We hope you find this template useful! This one is set up to yield a A0 horizontal poster.

We've put in the headings we usually see in these posters, you can copy and paste and change to your heart's content! We suggest you use black text against a light background so that it is easy to read. Background color can be changed in the design tab, background drop down menu.

The boxes around the text will automatically fit the text you type, and if you click on the text box, you can use the little handles that appear to stretch or squeeze the text boxes to whatever size you want. If you need just a little more room for your type, change the line spacing to a multiple >paragraph >line spacing. The type in your poster's text boxes should be at least 20 point.

Use them to get your pictures or text boxes aligned together.

How to bring things in from Excel® and Word®

Excel- select the chart, then copy (ctl+C), and paste (ctl+V) into PowerPoint®. The chart can then be stretched to fit or edited as required. Watch out for scientific symbols used in imported charts/

Word- select the text to be brought into the page, then paste the text into a new or existing text block. This text is editable. You can change the size, color, etc. in home >font. We suggest you not put shadows on smaller text. Stick with CALibri fonts so your collaborators will have them.

Tables that come in funny can often be fixed by doing paste >special >enhanced metafile.

Photos

We need images to be 72 to 100 dpi in their final size, a rough rule of thumb that a 500 kb jpg (2 megapixel) image file can go up to 30x40xcm on your poster. Do insert >from file to import them.

Preview: To see your in poster in actual size, go to view-zoom-100%. It's important to walk through your poster viewing it at full size to be sure it's going to look OK.
